

GENERAL EXCLUSION GUIDELINES FOR ILL CHILDREN/STAFF

Certain symptoms in children may suggest the presence of a communicable disease. Excluding an ill child may decrease the spread of the disease to others in the childcare and school settings. Recommended exclusion varies by the disease or infectious agent. Children with the symptoms listed below should be excluded from the childcare or school setting until symptoms improve; or a healthcare provider has determined that the child can return; or children can participate in routine activities without more staff supervision than usual.

NOTE: It is recommended that childcare/preschool providers and schools have policies that are clearly written for excluding sick children and staff. These policies should be placed in the student handbook or on the childcare or school website. Parents/guardians and staff should be given or directed to these resources at the beginning of each school year or when the child is enrolled or the staff member is hired. This will help prevent problems later when the child or staff member is ill.

Exclude children with any of the following:

Illness	Unable to participate in routine activities or needs more care than can be provided by the childcare/school staff.
Fever	With an elevation of body temperature above normal when accompanied by behavior changes, stiff neck, difficulty breathing, rash, sore throat, and/or other signs or symptoms of illness; or is unable to participate in routine activities. Measure temperature before giving medications to reduce fever. <u>Axillary</u> (armpit) temperature: 100° F or higher <u>Oral</u> temperature: 101° F or higher Ear temperatures are not recommended because of inconsistent and inaccurate results. Each manufacturer may have different temperature ranges, which makes setting standards difficult.
Signs/Symptoms of Possible Severe Illness	Until a healthcare provider has done an evaluation to rule out severe illness when the child is unusually tired, has uncontrolled coughing, unexplained irritability, persistent crying, difficulty breathing, wheezing, or other unusual signs for the child.
Diarrhea	Until diarrhea stops or until a medical exam indicates that it is not due to a communicable disease. Diarrhea is defined as an increased number of stools compared with a child's normal pattern, along with decreased stool form and/or stools that are watery, bloody, or contain mucus.
Vomiting	Vomiting two or more times in the previous 24 hours, unless determined to be caused by a noncommunicable condition and the child is not in danger of dehydration.
Mouth Sores with Drooling	Until a medical exam indicates the child may return or until sores have healed.
Rash with Fever or Behavior Change	Until a medical exam indicates these symptoms are not those of a communicable disease that requires exclusion.
Eye Drainage	When purulent (pus) drainage and/or fever or eye pain is present or a medical exam indicates that a child may return.

GENERAL EXCLUSION GUIDELINES FOR ILL CHILDREN/STAFF

Unusual Color of Skin, Eyes, Stool, or Urine Until a medical exam indicates the child does not have hepatitis A. Symptoms of hepatitis A include yellow eyes or skin (jaundice), gray or white stools, or dark (tea or cola-colored) urine.

For specific guidelines for childcare settings, see pg 3-8.

For specific guidelines for school settings, see pg 9-14.

There are specific guidelines for “sick childcare” programs (see Minnesota Department of Human Services licensing rules for those requirements).
