

Your child may have been exposed to:

## Pneumonia

Many different viruses and some bacteria can cause pneumonia (inflammation of the lungs).

### If you think your child has Pneumonia:

- Tell your childcare provider or call the school.
- **Need to stay home?**

#### Childcare and School:

**Yes**, until fever is gone and your child is healthy enough for routine activities.

**DO NOT give aspirin or salicylate-containing medicines to anyone under 18 years of age.**

### Symptoms

Your child may have a runny nose, cough, fever, rapid breathing, and chest pain.

### Spread

- By sneezing or coughing.
- By touching contaminated hands, surfaces, or objects.

### Contagious Period

Shortly before and while your child has symptoms.

### Call your Healthcare Provider

- ◆ If your child has a high fever or a sore throat or cough that does not go away.

Antibiotics do not work for illnesses caused by a virus, including colds and certain respiratory infections.

### Prevention

- Cover nose and mouth when sneezing or coughing. Use a tissue or your sleeve. Dispose of used tissues.
- Wash hands after touching anything that could be contaminated with the secretions from the mouth or nose. Your child may need help with handwashing.
- Clean and disinfect anything that comes in contact with secretions from the nose or mouth. Use a product that kills germs.
- **DO NOT** expose your child to second-hand tobacco smoke. Smoke increases the risk for serious respiratory infections and middle ear infections.
