

## **Work Type Definition: Indoor Air Quality and Industrial Hygiene Services**

### **I. Description**

This work type will provide consultant indoor air quality and industrial hygiene services for Hennepin County facility projects.

### **II. Description of services to be provided by consultant**

Typical project deliverables may include the following:

- Worksite and employee sampling for exposure to chemicals, dust, lead, asbestos, silica, mold and noise using approved sampling methodologies and ensuring proper laboratory analysis. Provide sampling equipment that is calibrated and meets regulatory requirements or best practices. Provides a written, detailed report with findings, photos and recommendations.
- Worksite assessments to evaluate HVAC equipment, facilities management practices and identifies potential pollutants and their impacts on employees/clients in our facilities. Where required, perform sampling to determine presence or location of indoor air pollutants. Provide written, detailed reports with findings, photos and recommendations to mitigate indoor air quality issues.
- Design of engineering controls and work practices.
