a tree

A bird with
black feathers

Bird
droppings

A bird with
long legs

A bird
with **white**
feathers

A bird
carrying
something

A bird **in or**
near water

A bird's nest

A bird with
talons

Take the pledge to protect birds in your neighborhood

The 300 bird species that call Hennepin County home play a vital role in our ecosystems. Birds spread seeds, pollinate flowers and trees, and create places for other animals to nest.

Unfortunately, bird populations are threatened by habitat loss, cat predation, collisions with buildings and cars, pesticides, plastics, diseases, and climate change. The good news: there are many actions we can take to work against these threats and help our flying friends!

Our household pledges to take the following actions to help our flying friends:

- Plant native vegetation to provide shelter and habitat
- Provide a variety of appropriate food sources
- Offer clean water sources year-round
- Install and maintain a bird house
- Limit the use of lawn chemicals and pesticides
- Keep household cats indoors
- Close window blinds and turn off outside lights during bird migration (late March to early June and mid-August to November)
- Place stickers or decals on windows to prevent birds from hitting them
- Take a bird walk to discover the flying friends that live in our neighborhood
- Teach a friend or family member about being bird friendly
- Contact the Wildlife Rehabilitation Center of Minnesota (wrdsn.org) to report an injured bird
- Record bird nest observations through the NestWatch app at nestwatch.org
- Use iNaturalist (inaturalist.org) or eBird (ebird.org) to document the wildlife in your neighborhood. Share your lists at [@hennepin_biomonitoring](https://twitter.com/hennepin_biomonitoring) or [#hennepin_biomonitoring](https://twitter.com/hennepin_biomonitoring)
